

Pneumatic pressure gauge test kit cpgkitp

Product codes:

Product attributes:

Reference:
PC200-00095
EAN13: -
UPC: -

Product description:

Pneumatic Service Kit Type CPG-KITP

Applications

- ? Oil and gas industry
- ? Maintenance and service sites
- ? Calibration service companies and service sector
- ? Simple calibrations directly on site

Special features

? Testing and adjustment of pressure gauges, pressure sensors, pressure switches or safety valves

? Reference instrument type CPG1500, uncertainty 0,05 % EM

? Pneumatic version up to 40 bar (maximum pressure generation with hand pump -950 mbar ... 35 bar (-13.5 ... 500 psi))

? Clear and simple operation

Simple operation If the instrument under test and the precision digital manometer type CPG1500 are connected to the test pump, when the pump is activated, the same pressure will be applied to both instruments. The test pressure is accurately set by means of the fine adjustment valve. It is then possible to check the accuracy and/or setting of the pressure measuring instrument under test by comparing the two measured values with a given pressure value.
